(205) 574-5539 | manikumarreddy48@gmail.com | <https://www.linkedin.com/in/mani2405/>

- ❖ Experience Software Developer with **7+ years** of hands-on experience in **Software Development Life Cycle(SDLC)**, adhering to Agile methodologies such as SCRUM, TDD, BDD, and Iterative models, with a focus on web applications built using Java, Spring, Hibernate, Microservices, and cloud platforms.
- ❖ Proficient in using both IntelliJ IDEA and Eclipse IDE for full-cycle Java application development, including coding, debugging, refactoring, testing, and deployment.
- ❖ Well-versed in a wide range of open-source frameworks, especially the Spring ecosystem, including Spring Boot, Spring MVC, Spring Batch, Spring Security, Spring Integration, and Spring Web Flow, along with Hibernate ORM.
- ❖ Solid command of Java 17, with in-depth knowledge of core concepts like Collections, Multithreading, Serialization, Exception Handling, Lambda expressions, Streams, Interfaces, RMI, and performance optimization.
- ❖ Competent in front-end development using modern technologies like Angular, React, Node.js, TypeScript, HTML5, CSS3, JavaScript, and AJAX.
- ❖ Designed and implemented secure authentication and authorization mechanisms in Java applications using OAuth 2.0 standards to enable delegated access and protect RESTful APIs.
- ❖ Development and integration of RESTful APIs to connect frontend and backend components, allowing seamless data exchange and functionality across the application.
- ❖ Deployed containerized Java/Spring Boot microservices on Red Hat OpenShift, utilizing OpenShift templates, ConfigMaps, and Secrets for dynamic, secure configuration.
- ❖ Developed and deployed scalable backend applications on Google Cloud Platform (GCP).
- ❖ Managed code repositories via Git and SVN, tracked bugs and tasks using JIRA, and conducted unit, integration, and UAT testing using JUnit and EasyMock.
- ❖ Developed complex GraphQL schemas defining queries, mutations, and subscriptions to support real-time data updates, improving client responsiveness and reducing over-fetching of data.
- ❖ Managed data storage solutions using Azure SQL Database, Cosmos DB, and Azure Blob Storage, optimizing for scalability and performance.
- ❖ Created and consumed SOAP APIs with well-defined WSDL (Web Services Description Language) files, ensuring strict contract adherence and interoperability with diverse client applications.
- ❖ Tuned Cassandra clusters for performance and reliability by configuring replication factors.
- ❖ Designed and developed custom message adapter components using Apache Kafka that allowed the message to travel through Microservices based on Restful API utilizing Spring Boot with Spring MVC.
- ❖ Proficient in Java, J2EE, Python, Scala, TypeScript, and JavaScript.
- ❖ Used Jenkins pipelines to drive all micro services builds out to the Docker register then deployed to Kubernetes, created pods and managed using Kubernetes.
- ❖ Planned project phases, defined scope, and managed resource allocation using Agile methodologies including Scrum and Kanban.
- ❖ Daily development and deployment experience on Linux/Unix systems, including bash scripting, cron jobs, file system operations, permissions, and SSH.
- ❖ Developed Python scripts for ETL, log parsing, and pipeline validation in Spark/Hadoop environments.
- ❖ Strong background in building cloud-native applications and microservices using Spring Boot and Spring Cloud, integrated with AWS services including EC2, S3, RDS, Lambda, and CloudWatch.
- ❖ Experience in ExpressJS, NodeJS, Spring Web Flux, Spring Boot.
- ❖ Proficient in writing complex SQL and PL/SQL (procedures, functions, triggers, packages), working with relational databases like Oracle, DB2, MySQL, and SQL Server, as well as NoSQL solutions such as MongoDB.
- ❖ Experience in asynchronous communication using messaging systems like ActiveMQ and JMS, and event-driven architecture with Apache Kafka.
- ❖ Skilled in version control systems (Git, GitHub, Bitbucket), build automation tools (Maven, Gradle), CI/CD pipelines with Jenkins, and managing containerized applications using Kubernetes.
- ❖ Experienced in testing and quality assurance using JUnit, Mockito, PowerMock, TestNG, and Cucumber, along with monitoring and logging tools like Log4J, Splunk, and Dynatrace

Technical Skills:

Programming Languages	Java, Javascript,Python
Web Technologies	Angular, HTML5, CSS3, JavaScript, Typescript
Framework	Spring Boot, MVC, JPA, Hibernate, JMS, Kafka, Spring Batch, Spring Security
AWS Cloud	EC2, S3, SNS, SQS, Lambda, DynamoDB, Cloud Formation, RDS
Web Services	SOAP, REST, Microservices, AWS, GCP
Databases	SQL Server, Oracle, My SQL, DB2, MongoDB, Cassandra, Dynamo DB
Design Methodologies	Agile, Scrum, Waterfall, TDD.
Testing/ Logging Tools	JUnit, Mockito, TestNG, PowerMock, Cucumber, Selenium, Log4J, Splunk, Grafana, Cloudwatch
Other Tools	Gradle, Maven, Jenkins, GitHub, Bitbucket, GIT, SourceTree, Gradle, Putty

Education :

Master in Computer Science, Pace University, New York

Bachelor in Computer science , Osmania University

CERTIFICATIONS :

[AWS Certified Developer – Associate](#) | Amazon Web Services | Issued: April 2025

JPMC | Plano, TX

Backend Software Developer

Jan 2023 – Current

Project Summary:

This project involved the design and development of a modernized Core Banking System aimed at replacing legacy monolithic platforms to support retail and commercial banking operations. The system handles critical banking functions such as customer account management, transaction processing, loan and mortgage servicing, payment processing, and regulatory compliance.

The platform was built to offer high availability, scalability, security, and real-time processing capabilities, enabling JPMC to deliver superior customer experience, faster transaction settlements, and compliance with evolving regulatory requirements like AML (Anti-Money Laundering), KYC (Know Your Customer), and Basel III.

Responsibilities:

- ❖ Involved in other phases of SDLC including requirement analysis, Testing Design and Implementation, Build validation and Business Support.
- ❖ Participated in 2-week Agile sprints involving sprint planning, daily standups, sprint reviews, and retrospectives to deliver incremental product improvements.
- ❖ Collaborated in pair programming environments to improve code quality, share knowledge, and resolve complex logic in real time.
- ❖ Followed TDD practices using JUnit, Mockito, and TestNG to write unit tests before implementation, ensuring functionality and minimizing regressions.
- ❖ Utilized Java 17 features like Lambda expressions and Stream API for Bulk data operations on Collections which would increase the performance of the Application.
- ❖ Strong experience on various J2EE Design Patterns such as Session Façade, Singleton, Factory Method, DAO, Front Controller, and Delegate Pattern and SOLID design principles.
- ❖ Implemented Spring boot microservices to process the messages into the Kafka cluster setup.
- ❖ Involved in breaking down monolithic applications to Microservices using spring boot, REST, Kafka, AWS.

- ❖ Spearheaded full-stack development using Java 17, Spring Boot, and Kafka, delivering high-performance, scalable applications.
- ❖ Collaborated closely with backend teams to define API contracts using TypeScript interfaces and models, improving frontend-backend integration
- ❖ Implemented JWT (JSON Web Tokens) for stateless token-based authentication, managing token issuance, validation, refresh, and revocation.
- ❖ Handled SOAP security features including WS-Security, XML Encryption, and Digital Signatures to ensure confidentiality, integrity, and authentication.
- ❖ Used Git for source control and set up CI pipelines with Jenkins for automated testing and deployment.
- ❖ Built preprocessing logic to sanitize, validate, and normalize incoming data streams before storage in DynamoDB.
- ❖ Developed and maintained enterprise-grade asynchronous messaging solutions using Java Message Service (JMS) to enable reliable communication between distributed microservices and legacy systems.
- ❖ Tracked and resolved issues using JIRA, maintaining full traceability throughout the software development lifecycle.
- ❖ Optimized MySQL performance through efficient query design, stored procedures, and indexing strategies.
- ❖ Managed Docker orchestration and Docker containerization using Kubernetes.
- ❖ Extensively worked on JPA with Hibernate as persistence layer and developed RESTFUL web services using Spring boot, Spring RESTFUL template.
- ❖ Enhanced database performance using JDBC and Hibernate, optimizing SQL (PostgreSQL, MySQL) and NoSQL (DynamoDB, MongoDB) queries for faster execution.
- ❖ Hands-on experience in building tools like Maven, Gradle and TDD using Junit Testing and Mockito, Log Analysis using Splunk/DataDog.
- ❖ Experienced in HTML5, CSS3, Bootstrap, and JavaScript frameworks such as Angular 13 and ReactJS. Skilled in jQuery, AJAX, RxJS, and Dependency Injection for dynamic UI development.
- ❖ Designed and implemented REST APIs for seamless integration between microservices and external systems.
- ❖ Automated infrastructure deployment using Terraform to manage AWS resources like EC2, S3, RDS, and Elastic Load Balancing.
- ❖ Implemented messaging and integration using Azure Service Bus and Event Grid to enable reliable asynchronous communication between microservices.
- ❖ Used Oracle as a database and involved in the development of PL/SQL backend implementation.
- ❖ Adept at collaborating in Agile environments, with hands-on experience in unit testing using JUnit and Mockito, and behavior-driven development using Cucumber.
- ❖ Built SPAs using Angular, React.js, Node.js, and Express.js, utilizing Angular routing for structured navigation.
- ❖ Enhanced user-facing applications by integrating Angular for dynamic and responsive front-end components.
- ❖ Developed serverless applications leveraging AWS Lambda, API Gateway, and DynamoDB for cost-efficient solutions.
- ❖ Led efforts to build Kubernetes clusters for containerized application deployment, ensuring high availability and fault tolerance.
- ❖ Conducted performance and load testing with JMeter, optimizing APIs to handle peak traffic scenarios efficiently.
- ❖ Implemented logging and monitoring using AWS CloudWatch and Splunk, ensuring 99.9% uptime for mission-critical applications.
- ❖ Coordinated cross-functional teams to implement OAuth2-based authentication for securing RESTful services.
- ❖ Delivered advanced CI/CD pipelines using Jenkins, integrating testing, security scans, and deployment automation.
- ❖ Provided production support for critical systems, resolving incidents promptly and minimizing downtime.
- ❖ Trained team members on Angular best practices and AWS deployment strategies, fostering a collaborative environment.

Environment: Java 17, Spring Boot, Spring Batch, Hibernate, Kafka, Azure, Maven, Typescript, OAuth, Microservices, SOAP, JMS, GIT, Junit, SDLC, MongoDB, SQL, Cucumber, Jenkins, HTML-5, CSS-3, Javascript, Docker, Pair

programming, JWT, Kubernetes, AWS (EC2, S3, Lambda, DynamoDB, CloudWatch, RDS, React Js, NoSQL, Mockito, API Gateway), Angular 13, Node.js, JIRA, Splunk, JMeter.

Hitachi Energy , Kathmandu
Full Stack Java Developer
March 2019 - December 2022

Project Description:

The project involved developing a cloud-native, scalable, and resilient platform for managing critical infrastructure assets deployed worldwide. This system supports real-time monitoring, predictive maintenance, and lifecycle management of assets such as industrial machinery, power grids, and transportation systems. The platform integrates with IoT devices to collect telemetry data, processes massive data streams, and provides actionable insights to operations teams, enabling proactive maintenance and minimizing downtime.

Responsibilities :

- ❖ Followed AGILE Methodology with SCRUM Meetings and involved in maintaining Sprint backlogs during the development cycles.
- ❖ Actively involved in the analysis, definition, design, implementation, and deployment of full Software Development Life Cycle (SDLC) of the project.
- ❖ Worked on Java to upgrade using a new library for refactoring, lambda, functional interfaces, streams -parallel processing and aggregations.
- ❖ Developed application using Web Services for data access from legacy applications and integrated with new GUI developed using JSP, HTML-5, XML, Angular, Bootstrap, Spring Framework.
- ❖ Used GIT as a version control, Jira, Maven for build tools and Jenkins for continuous build systems.
- ❖ Deployed, managed, and scaled microservices applications in production using Kubernetes (K8s) clusters.
- ❖ Involved in multi-tiered J2EE design utilizing Spring Inversion of Control and Hibernate.
- ❖ Implemented configured and customized JIRA issue tracking software with agile plug-in across all company functions and acted as JIRA administrator.
- ❖ Used Hibernate, Object Relational Mapping (ORM) solution, technique of mapping data representation from MVC model to Oracle Relational data model with an -based schema.
- ❖ Written JUNIT for the test cases and used Mockito framework to confirm the expected results.
- ❖ Experienced Using a Microservice architecture, with Spring Boot-based services interacting through a combination of REST and Apache Kafka message brokers.
- ❖ Actively participated in the daily SCRUM meetings to produce quality deliverables within time
- ❖ Implemented RESTful web services using Apache CXF, Jersey for JAX-RS System built using Model-View-Controller (MVC) architecture.
- ❖ Wrote SQL queries and PL/SQL – Stored procedures, functions, triggers, cursors, sequences, and indexes, which are going to be invoked by Batch processes.
- ❖ Developed serverless applications leveraging AWS Lambda, API Gateway, and DynamoDB for cost-efficient solutions.
- ❖ Closely worked with the Kafka Admin team to set up Kafka cluster setup on the QA and Production environments.
- ❖ Involved in development of a test environment on Docker containers using Kubernetes.
- ❖ Applied JavaScript, jQuery, AJAX, and Angular to enhance user experience with input validation and dynamic UI components.
- ❖ Building server-side logic and database using Node.js, and Java, managing various APIs and upstream APIs, and integrating with various data sources.
- ❖ Developed and maintained responsive web applications using React.js, improving user experience and performance across devices. Implemented React functional components with Hooks (useState, useEffect, useContext) to manage component logic and state.
- ❖ Implemented the application using the concrete principles laid down by several design patterns such as DTO, Intercepting Filters, Singleton and Data Access Object (DAO).

- ❖ Designed and developed a JDBC driver that intercepts a create view DDL parses it, converts it to a relational model, and stores it in the database.
- ❖ Worked on using WebSphere server built in Java Message Service(JMS) provider for communicating with legacy applications
- ❖ Configured Jenkins jobs to make sure the project is built successfully in a different development environment.
- ❖ Automated build process through Maven build framework.
- ❖ Wrote many shell scripts in Unix to call routines
- ❖ Configured and built Asynchronous communication with JMS services with MQ services.
- ❖ Involved in fine tuning the Enterprise JBOSS image.
- ❖ Developed Spring-based applications using Drools and Java.
- ❖ Worked on Log4J to validate functionalities and JUnit for unit testing

Environment: Java, J2EE, JavaScript, Hibernate, Spring Batch, SQL , AWS, Spring Boot, Mockito, SDLC, DynamoDB, Microservices, Kafka, Spring Security, HTML-5, APIs, Node.js, Angular Js, Spring MVC, Spring JDBC, ORM, JUnit, Jenkins, Unix, Maven, JMS, Kubernetes, RESTful, MQ services, Mule ESB, Agile, Gitlab, JIRA.
